## Talking Genie Crack + With Registration Code

----- Title: Talking Genie Version: 1.0.0 License: No  
Publisher: SeaBreeze Interactive Developer: Seabreeze Interactive Homepage: Email:  
info@seabreeze.com ----- Getting Started:

----- 1. Unzip the file "TalkingGenie1\_0\_0\_pro.zip" to your  
computer's desktop 2. Run the exe file "TalkingGenie1\_0\_0.exe". 3. Specify a text in the  
text box and hit the Start button to listen to the result. 4. For listening the result, you will not  
need any internet connection. For quick review and checking the results:

----- Right click the exe file and select "Properties" In the  
"General" tab, there is a button "Enable Debugger". Click this button to view the "In-  
process" debugger. You can choose to hide the exe in the system taskbar and also the  
taskbar's system tray. The "Hide Icon in Windows Taskbar" option will be ticked. Read the  
"Release Notes". The exe runs on Windows XP, Windows Vista, and Windows 7 in English  
and in French. ----- End-User Licensing Agreement:

## What's New In Talking Genie?

This application works with the text to speech Microsoft Agent API core. The Lernout and Hauspie TruVoice is used to process the text inputs. This application is still very much under development and therefore is built on top of the Microsoft Agent API core, Lernout and Hauspie TruVoice. This application uses most of the technology from the Talking Genie application. Some of the components of Talking Genie are inherited from the current application. The list of features available are: Language support : English, French, Spanish, German, Russian, Simplified Chinese, Traditional Chinese, Polish, Czech, Hungarian, Indonesian, Malay, Vietnamese, Thai, Korean, Persian and Arabic. There is a special case of Korean which have mostly long sound values like word "???" and which is very difficult to recognize. (This is the reason why Korean is not included in the complete list of language support.) Number of voices support: only English, French, Spanish, German and Russian are supported with built-in voices. Pitch recognition: Since version 2.2.0 of the core module, there is a new voice for pitch recognition. It will be adjusted to the proper pitch of your voice. However, it may still be a problem to apply the right pitch to your voice since the core module is designed to be used with the Lernout and Hauspie TruVoice engine. You can find more information about this in the User Guide. Other advanced functionalities: Basic TTS engine is only able to understand simple words. However, the user has the option to select a number of advanced TTS settings including voice pitch and speed. Spelling correction: When you type a word, the application will automatically spellcheck your text. Compatibility: The application should work fine with all Microsoft Agent API released versions. The latest released versions of Microsoft Agent API core are 2.3.1, 2.4.1, 2.5.0 and 2.6.0. The application does not work with Lernout and Hauspie TruVoice version 5.0 and later. The core of the application works with the core module version 2.4.1. What's New in 2.6.0: New core module: there are new release of the core module. The latest version of the core module is 2.6.0 which is available in the 2.6.0.zip file. There are some other changes including but not limited to: - the used code base is quite different. The application is no longer using the Msft Agent API directly but using the custom interfaces as shown in the new.xml file - the TTS engine now uses the Microsoft Speech Server instead of the Core

---

module - there are small changes in the batch files - a new voice named "
