To take a picture of a building or landscape, you tilt the camera up at a shallow angle and get an effect much like what you'd see with a lens with a very large focal length. The large angle of view and small focal length of the lens makes a scene look like a miniature. Tilted-shift lenses enable the photographer to capture unusual depth in an image, as though the picture is looking at a distant scene through a window. This technique is commonly used in architecture and landscape photography. You can find a variety of tilt-shift lenses on the market. Professionals and hobbyists use this technique for architectural photography. ## Apple's Final Cut Pro Photoshop, Lightroom, and many other image editing and graphics programs are used professionally by many people. What is Photoshop Elements? Photoshop Elements is a photo editor designed for ordinary people and it does a good job. It allows you to edit, organize, retouch or add effects to your digital images. It is also a graphic design program that allows you to create pages, logos, web graphics or any other graphical user interface. The main window of Photoshop Elements is divided into several areas: History where you can see the old versions of the picture you are editing. Crop where you can see the frame of your pictures. Image can be opened in the opened window where you can process it. The editing area where you can make your alterations to the picture. The adjustment tools palette. Photoshop Elements has many features, such as the ability to correct and crop the picture in the crop area, apply several layers and merge them, crop, add filters, move, and rotate and edit your pictures. As with other types of edits, Photoshop Elements presents them to you through a tool called the History. Through this tool, you can select any image version, go back and even undo what you have done. You can also remove a version by clicking on the trash bin icon on the right-hand side. With many colors, textures and styles, you have the ability to style your pictures and give them an interesting effect. In Photoshop Elements, you can add different frames, connect and disconnect different elements, rotate, move, and crop the picture. One important thing about Photoshop Elements is that it is a free software with a paid add-on. It works on all OS (operating system). If you want to know the exact price of the software, you can check the link we provide below. WWE has announced that the Road to WrestleMania 29 will feature a "State of the Union" address from one of their headliners, Brock Lesnar. No word on who will be speaking. But we would have to assume this is a standard press conference of sorts, in which "The Beast" delivers a check in address of one sort or another. The timing of the announcement also makes sense, coming just eight days before WrestleMania. WrestleMania 29 will take place on April 2 at Raymond James Stadium in Tampa, Florida. Q: How to watch and prevent angular css changes in ionic 2 I'm trying to prevent the browser from changing the (specific) css class of an element. In this example, I'd only like the browser to not change the class on the left if the right value is true. I've tried, for example, with: .test:class(${this.testLeft + this.testRight}) { background: red; } However, it looks like the class (and styling) is being passed through to the css file. Is there a way I can prevent the class and css styling of my divs from being refreshed when the tests change? Thanks! A: As @Matthew suggested, the answer is, as of April 2016, "No, you cannot prevent the css file from being updated. You can, however, call a CSS reset that puts all browsers back to a standard reset state." A former top Ukrainian official was missing from his family home in Kiev on Wednesday, a day before he was to be extradited to Egypt to face trial over a long-running love affair he had with an Egyptian woman. A Ukrainian official in Cairo, who refused to be identified, said Viktor Diivy, a former Ukraine's Security Service (SBU) director, was being held at a secret detention centre in a suburb of Cairo. A close relative said Mr Diivy had been travelling with his wife to Budapest on a business trip when they were arrested on Monday evening. A Ukrainian official said the extradition process would be lengthy and that Mr Diivy would not be able to communicate with his family or to contest extradition at a Cairo court. As yet, the autorities have not announced that they have requested extradiction for him. There is no evidence that Egypt has been trying to get a hold of this German citizen. The Egyptian authorities have not issued a request for the extradition of Mr Diivy. However, it is possible that the Egyptian investigation into his affair with
